Goslar, 06.11.2019

re: **Evaluation of Cu Powder, IGAS research No. [redacted]**
80 kg ex Party No. [redacted]

on 06. November 2019 we have been requested to comment on the value of a Lot of ultrafine Copper Powder (Party No. [redacted]). The material was sampled and chemically analyzed by IGAS research. The chemical composition is described in the 'Certificate of Analysis' **IGAS research No.** [redacted]. The purity was identified as **99,9991 % Cu** (certificate of analysis *IGAS research No.* [redacted].

Material having small particle sizes are offered to the market at a wide range of prices between c.€29/g (purity 99%; 2-3,5µm, ref. alfa.com) and €1820,-/g (purity 99,999%; 2-100µm, typically ca. 20µm, ref. to various evaluation Report summaries, issued in 2017/2018 by: "Institut für Seltene Erden und Metalle e.V.", Düsseldorf/Germany). And we have observed that there is apparently an increasing attraction especially from industrial users as well as from investors for such material which justifies an increase of value for such material.

Taking into account that the material which is subject to this evaluation is of significantly higher purity than the reference products of Alfa-Aesar and comparable companies - it is even of better quality than of those which were evaluated by ISE in 2017/2018 and later for example - and in the light of the fact that in an earlier evaluation by the independent expert 'Institute for Rare Earthes and Metals e.V.' of Duesseldorf they have valuated similar material at €2750,-/g (US$3050,-/g, e.g. "Valuation Report summary #[redacted]-2")* we believe that it might be justified to assign this material to a value of €2100,-/g.

Fixing of prices are in the responsibility of the relevant partners in the market only. Therefore we can not guarantee at all that the above quoted price will be fixed nor do we comment on any other price which might be achievable when trying to sell this type of material.

Sincerely

IGAS research
Landstraße 88a
